### **Cervical Laminectomy**

	Address:	
Facility:	Date of Birth:	Sex: M F

URN:

Family Name:
Given Names:

A Cervical Laminectomy is performed to relieve the pressure on the spinal cord in your neck.

### C. Risks of this procedure

There are risks and complications with this procedure. They include but are not limited to the following.

### Common risks and complications include:

- Infection, requiring antibiotics and further treatment
- Minor pain, bruising and/or infection from IV cannula site. This may require treatment with antibiotics.

### Uncommon risks and complications include:

- Bleeding can occur and may require a return to the operating room. Bleeding is more common if you have been taking blood thinning drugs such as Warfarin, Asprin, Clopidogrel (Plavix or Iscover) or Dipyridamole (Persantin or Asasantin).
- Heart attack due to the strain on the heart.
- Stroke or stroke like complications may occur causing neurological deficits such as weakness in the face, arms and legs. This could be temporary or permanent.
- Nerve root injury causing a weak arm/s, or sensory loss. This may be temporary or permanent.
- Ongoing persistent neck and arm pain. This may not improve after surgery and may continue to deteriorate despite surgery.

(Affix patient identification label here)

- Small areas of the lung may collapse, increasing the risk of chest infection. This may need antibiotics and physiotherapy.
- Increase risk in obese people of wound infection, chest infection, heart and lung complications, and thrombosis.
- Blood clot in the leg (DVT) causing pain and swelling. In rare cases part of the clot may break off and go to the lungs.

### Rare risks and complications include:

- Leakage of cerebrospinal fluid. This may require further surgery.
- Instability of the cervical spine which may require further surgery and fusion.
- Quadriplegia, which may be temporary or permanent.
- Injury to the vertebral artery, which may result in stroke.
- Meningitis may occur requiring further treatment and antibiotics.
- · Death as a result of this procedure is very rare.

I acknowledge that the doctor has explained;

- my medical condition and the proposed procedure, including additional treatment if the doctor finds something unexpected. I understand the risks, including the risks that are specific to
- the anaesthetic required for this procedure. I understand the risks, including the risks that are specific to me.
- other relevant procedure options and their associated risks.
- my prognosis and the risks of not having the procedure.
- that no guarantee has been made that the procedure will improve my condition even though it has been carried out with due professional
- the procedure may include a blood transfusion.
- tissues and blood may be removed and could be used for diagnosis or management of my condition, stored and disposed of sensitively by the hospital.
- if immediate life-threatening events happen during the procedure, they will be treated accordingly.
- a doctor other than the Specialist Neurosurgeon may conduct the procedure. I understand this could be a doctor undergoing further training.

### I have been given the following Patient Information Sheet/s:

- About your Anaesthetic □ Cervical Laminectomy
- I was able to ask questions and raise concerns with the doctor about my condition, the proposed procedure and its risks, and my treatment options. My questions and concerns have been discussed and answered to my satisfaction.
- I understand I have the right to change my mind at any time before the procedure, including after I have signed this form but, preferably following a discussion with my doctor.

On the basis of the above statements,

Given N	Names:	
Addres	s:

### 1. What is a Cervical Laminectomy?

A Cervical Laminectomy is performed to relieve the pressure on the spinal cord in your neck.

A cut will be made in the skin at the back of your neck. X-rays will be taken during surgery and used to confirm the correct levels of the spine.

Small portions of bone and ligaments will be removed from the affected cervical spine to relieve the pressure on the spinal cord.

The cut will be closed with stitches or staples.

Cervical Laminectomy, Herston Multi Media Unit, RBWH, 2009

### 2. My anaesthetic

This procedure will require a General Anaesthetic.

See **About your Anaesthetic** information sheet for information about the anaesthetic and the risks involved. If you have any concerns, talk these over with your doctor.

If you have not been given an information sheet, please ask for one.

## 3. What are the risks of this specific procedure?

There are risks and complications with this procedure. They include but are not limited to the following.

### Common risks and complications include:

- Infection, requiring antibiotics and further treatment.
- Minor pain, bruising and/or infection from IV cannula site. This may require treatment with antibiotics.

### Uncommon risks and complications include:

 Bleeding can occur and may require a return to the operating room. Bleeding is more common if

- you have been taking blood thinning drugs such as Warfarin, Asprin, Clopidogrel (Plavix or Iscover) or Dipyridamole (Persantin or Asasantin).
- · Heart attack due to the strain on the heart.
- Stroke or stroke like complications may occur causing neurological deficits such as weakness in the face, arms and legs. This could be temporary or permanent.
- Nerve root injury causing a weak arm/s, or sensory loss. This may be temporary or permanent.
- Ongoing persistent neck and arm pain. This may not improve after surgery and may continue to deteriorate despite surgery.
- Ongoing deterioration in symptoms despite adequate decompression.
- Visual disturbance. This may be temporary or permanent.
- Small areas of the lung may collapse, increasing the risk of chest infection. This may need antibiotics and physiotherapy.
- Increase risk in obese people of wound infection, chest infection, heart and lung complications, and thrombosis.
- Blood clot in the leg (DVT) causing pain and swelling. In rare cases part of the clot may break off and go to the lungs.

### Rare risks and complications include:

- Leakage of cerebrospinal fluid. This may require further surgery.
- Instability of the cervical spine which may require further surgery and fusion.
- Quadriplegia, which may be temporary or permanent.
- Injury to the vertebral artery, which may result in stroke.
- Meningitis may occur requiring further treatment and antibiotics.
- Death as a result of this procedure is very rare.
